

## **Directions for making Compost Extract**

- Place empty extractor bag in a 5-gallon bucket.
- Fill extractor bag with the first five ingredients.
- Fill bucket with enough water to soak ingredients.
- Let soak for at least 15 minutes and up to 24 hrs
- Take the bag out of the 5 gallon bucket, and clip it to the top edge of your 55 gallon barrel.
- Dump the liquid into the barrel and fill the 55-gallon barrel halfway with water.
- While running the water through the extractor bag you can massage the ingredients in the bag to release more microbes.
- Right before application add:
  - Fish Hydrolysate
  - Extreme Azos (If you need the nitrogen)
  - Mycorrhizal
  - Glacial Rock

Flush for 2 weeks and continue to use molasses and Hygrozyne.

When making compost Extract the brew time is 1-4 hrs.  
AACT (Actively Aerated Compost Tea) is a 24-48 hr process.  
Let your nose tell you if you were successful or not.
